Report on the 4 laws

1st Law: A computer shall not harm your work or, through inaction, allow your work to come to harm.

The website does not comply with the first law because if we are in the middle of a survey and for any reason we leave the computer inactive and the screen reaches a state of rest, then the progress of the survey will be lost, none of the information will be It will save as long as we don't press the send key, and much better if we create a user, that will give us greater security when saving our information.

2nd Law: A computer shall not waste your time or require you to do more work than is strictly necessary.

The website does not make us waste time since in the upper section we can find the link that redirects us directly to the selection of cars and to a survey that allows us to request the same, if it asks us to log in, but it is the only thing that It will ask us for the application and it will only be the first time that we enter the web page, from then on we can do it freely.

3rd Law: An interface is humane if it is responsive to human needs and considerate of human frailties.

Thanks to the modifications and the frames and div that we have implemented in the source code of the web page, it has become responsive and will adapt to any device in which we open it.

4th Law: The user should set the place of interaction.

The place of interaction should not be established since it can be done after the comfort of our home or at the workplace, the only location that would be requested is if we require personalized attention and we want the vehicle to be brought closer to the user.
