Business rule

Components that make up the calculator:

- Calculation statements that you can write or design using members, functions, and conditional statements.
- Conditional statements (that is, If...Then statements) that are either true or false.

Forms in which the calculator will work for the implemented operations

- For this case, buttons are used in which each of them contains the respective programming so that it can carry out the assigned operations.
- Results of each operation will be displayed using alert messages
