¿WHAT IS A PROGRESSIVE WEBSITE?

Progressive Web Apps are not a new technology, but they are even more fashionable lately after Microsoft announced that Windows would support them natively. They are also available in Google Chrome, Firefox and Safari.

FEATURED:

The so-called "Progressive Web Apps" are a type of mobile application but built with web technologies, that is, using HTML, CSS and Javascript and work on any platform that contains a browser to run it. Some characteristics of a PWA child:

- responsive design
- Works regardless of available connection
- it's safe
- Installable: Users can add an icon as a native app on their device's homescreen!

Requirements to do pwa

- Basic knowledge of Javascript, CSS and HTML
- The OneUI CSS library to add responsive design, that is, it looks good on any device, whether it's a cell phone, tablet or your notebook!
- your favorite web browser
