Business rule

A business rule is a condition that must be satisfied when performing a business activity. A rule can enforce a business policy, make a decision, or infer new data from existing data.

Rule sets

A rule set is a set of business rules that are evaluated sequentially.

- **If-then rule**

    Rule where **if** is the condition and then is the action.

They are textual statements and the action is only performed if the condition evaluates to true.

- **Action rules**

An action rule is a rule in which the action is always performed.

Calculation rules

- It is a mathematical operation that allows to obtain a certain value.
- Each product must belong to a category.
- Create a price rule.
- Implement in the form different buttons, which will allow us to perform the basic operations to determine the price of the chosen products.
